PROFESSIONAL SUMMARY

Gen AI & Backend Engineer with a strong foundation in Data Structures, Algorithms, and System Design. Specializes in deploying enterprise-grade AI solutions and high-throughput microservices using Python and FastAPI. Experienced in translating business requirements into production-ready RAG pipelines, semantic search engines, and multi-agent systems on Microsoft Azure to drive measurable impact.

TECHNICAL SKILLS

- **Languages & CS Fundamentals:** Python, SQL, Data Structures and Algorithms, Object-Oriented Programming (OOP), System Design (LLD/HLD), Operating System, DBMS.
- **Gen AI & Agentic AI:** Retrieval-Augmented Generation (RAG), LLM Integration (OpenAI, Claude), LangChain, LangGraph, CrewAI, AutoGen, Agent Deployment, Agent Evaluation, MLOps, Machine Learning, n8n, Copilot Studio, Model Context Protocol (MCP), Agentic AI, Multi-Agent Orchestration.
- **Backend & Web Technologies:** FastAPI, REST APIs, API/Backend Design, HTML/CSS, Django.
- **Databases:** MySQL, Vector Databases (FAISS, Chroma DB), NoSQL (MongoDB).
- **Microsoft Azure Services:** App Service, VNet, AI Foundry, OpenAI Service, Cosmos DB, SQL Server, Function App, APIM, Azure Batch Services, Private Endpoint, Data Factory, Microsoft Fabric
- **Core Developer Tools:** Git, GitHub, Docker, Postman, VS Code, Cursor AI.
- **AI Productivity & Assistants:** GitHub Copilot, Claude Codex, Claude Code, Claude Cowork, Google Antigravity.

EDUCATION

- **B.Tech in Computer Science & Engineering** | Vidya Vihar Institute of Technology | 2021 – 2025
    - **CGPA: 9.2/10** (Silver Medalist for academic excellence).

PROFESSIONAL EXPERIENCE

LTIMindtree | Data Scientist (GenAI) | Mar 2025 – Present

- Architected and scaled fault-tolerant backend infrastructure using FastAPI and Azure App Service within secure VNet environments, ensuring sub-second latency for high-concurrency enterprise requests.
- Spearheaded the integration of Large Language Models (Azure OpenAI, Claude) and multi-agent orchestration into enterprise workflows, optimizing RAG pipelines and vector retrieval systems (FAISS, Cosmos DB) to process large-scale proprietary datasets.
- Designed robust, event-driven data pipelines and batch processing systems using Python and Microsoft Azure cloud services, significantly reducing manual operational overhead and accelerating data delivery across multiple business units.
- Collaborated cross-functionally with product and engineering teams to translate complex business requirements into scalable, LLM-powered microservices, establishing rigorous MLOps and AI governance standards for production deployments.

PROJECTS

Sales Intelligence AI | *Python, Data Pipelines, Lead Scoring Algorithms*

- Engineered an automated data pipeline to replace manual lead generation, dynamically aggregating real-time buyer intent signals and matching leads against ideal customer profiles.
- Cut prospect research time by 90% and significantly increased pipeline targeting accuracy through real-time, actionable business insights.

Enterprise Resource Optimization Engine | *Python API, Batch Processing, Azure OpenAI*

- Developed a robust candidate matching and talent analytics system using a Python API and batch engine to process high volumes of resume data via exact skill matching and Azure OpenAI semantic embeddings.
- Improved hiring shortlist quality and delivered faster, highly visible talent insights for recruiters and hiring managers.

Internal Job Recommendation Engine | *Python, Semantic Search, Azure OpenAI*

- Engineered an automated recommendation system to optimize internal mobility, utilizing LLM embeddings to dynamically match bench candidates' profiles and skill sets against open enterprise roles.
- Accelerated candidate placement from the bench and improved internal hiring efficiency by delivering highly accurate, personalized job matches directly to employees.

AI Governance & RAG Evaluation Platform | *Python, LLM-as-a-Judge, Azure OpenAI*

- Engineered an automated governance platform utilizing Python and the **Ragas evaluation framework** to systematically monitor enterprise RAG pipelines for context precision, recall, and answer faithfulness.
- Mitigated LLM hallucinations and silent quality degradation, improving baseline response accuracy by **90%** and ensuring strict data compliance across production applications.

ACHIEVEMENTS

- **Competitive Programming:** Maintained a 365-day problem-solving streak on LeetCode, demonstrating consistent mastery of complex data structures and algorithms.
- **GATE CS (AIR 1417):** Secured an All India Rank of 1417 in the GATE Computer Science 2026 examination, successfully qualifying for two consecutive years (2025, 2026).
- **University Silver Medalist:** Awarded for top academic excellence across the B.Tech Computer Science & Engineering cohort.
- **NPTEL Honors:** Ranked in the Top 1% nationally for Operating Systems and recognized as the Topper in Data Structures & Algorithms in Python.
